SKILLS

- Java (Spring Boot/JUnit), Python, Azure, API Development, Kotlin, JavaScript, Agile, Waterfall, Git, SQL
- Operating Systems, Game Development, Microservices, Backend, Leadership, Teamwork, Android App Development, Business Analytics, Database Management, Project Management

EDUCATION

Indiana University-Bloomington || Bloomington, IN

August 2022 – December 2025

B.S. Computer Science, Certificate: Business & Statistics

Relevant Coursework: Data Structures and Algorithms, Operating Systems, SQL Database Management, Mobile App Development, Software Engineering, User Experience/User Interfaces, Object-Oriented Programming, Artificial Intelligence, International Business, Marketing, Information Technology

WORK EXPERIENCE

Cook Medical: Software Engineering/Cloud Engineering Intern

May 2025 – August 2025

- Developed and deployed serverless cloud applications using Azure Functions, Logic Apps, Event Grid, and Cosmos DB, improving automation and reducing manual team workloads.
- Engineered a secure SFTP-to-Azure file transfer pipeline in Java, enabling automated 5-minute scheduled file processing with centralized logging, monitoring, and fault handling.
- Built a real-time Smart Notification System that delivers automated alerts to internal medical teams, increasing response visibility and reducing communication delays.
- Integrated Azure OpenAI with REST APIs and MongoDB to create an intelligent medical knowledge bot, enabling faster access to critical information and clinician resources.
- Applied DevOps and cloud security best practices including GitHub version control, RBAC, encrypted configuration, and event-driven monitoring to ensure reliability and compliance.
- Collaborated in an agile environment, participating in code reviews, sprint planning, and cross-team architectural discussions while delivering production-ready solutions and clear documentation.

SIRA Radiology: *Operations Management & Software Engineer* Intern

June 2022 – September 2023

- Provided the bridge between the IT department and the Radiologists to develop projects that benefit both departments.
- Streamlined workflow optimization by analyzing and improving scheduling systems, reducing patient wait times by 15%
- Developed quality control methods for imaging equipment that complied with ACR and MQSA
- Monitored and analyzed operational data to improve resource allocation, leading to a 10% increase in productivity.
- Collaborated with cross-functional teams using the Agile method to develop projects with software engineers.
- Oversee deployment of Radiology Information System updates, enhancing scheduling, billing, and reporting, improving the overall operational efficiency.

PROJECTS

Secure File Transfer Protocol Project

- Engineered a Java-based Azure Function (Timer Trigger) to automate SFTP-to-Azure File Share transfers every 5 minutes, replacing manual file handling and enabling continuous, event-driven workflows.
- Implemented secure SFTP integration using private key authentication, Azure Storage SDK, and encrypted configuration values, ensuring compliance with enterprise security standards and protecting PHI-adjacent data.
- Achieved sub-3-second average transfer times and 99%+ reliability by adding retry policies, exception handling, and robust monitoring through Azure Application Insights and platform logs.
